Activity 02 - Prompt an Evidence-Led Infographic Brief

- Course: Infographics and Data Visualization with PowerPoint (TGS-2026064178)
- Duration: 35 minutes
- Tools: Approved AI assistant + PowerPoint
- Output: Portrait infographic brief, low-fidelity wireframe and design rationale

Objective

Turn verified insights into a structured ai brief and prompt that controls audience, message, evidence, form and output.

Scenario

Northstar plans a sustainable-delivery campaign. The communication manager needs a portrait infographic showing the customer journey from order to low-emission delivery. Use the supplied prompt workbook to ask AI for two wireframe directions. Select one by evidence fit, then preserve it as the control brief for Microsoft 365 Copilot, Gemini Notebook or PowerPoint.

Detailed instructions

1. Open the brief and prompt pack. Open the A02 workbook, PROMPTS.md and start PPTX. Save named working copies and select only the verified A01 insight chain as input.

2. Define the control brief. Complete Audience, Business question, Desired action, Success evidence, approved claims, forbidden claims, output channel and owner.

3. Choose the infographic form. Select timeline, process, comparison, statistical, hierarchy or hybrid. Explain why it reveals the relationship better than two alternatives.

4. Write the structured prompt. Use the prompt anatomy in the workbook: role, audience, objective, approved evidence, hierarchy, format, brand, accessibility, constraints and output.

5. Request two directions. Ask the approved AI tool for two low-fidelity wireframe directions. Require labelled content zones, source space and no invented data or imagery.

6. Score the directions. Compare both options for question fit, hierarchy, evidence space, reading order, accessibility and ease of PowerPoint refinement.

7. Build the approved wireframe. In PowerPoint set a portrait canvas, turn on guides and recreate only the selected direction with editable grey placeholders.

8. Test the reading path. Zoom to 25 percent. Ask a peer to point to first, second and last. Move or simplify blocks until the intended order is consistent.

9. Record the decision. Capture the chosen direction, rejected option, prompt, removed content, intended channel, accessibility risks, reviewer and owner.

Suggested timing

- 5 minutes - Complete the brief
- 5 minutes - Choose and justify the form
- 15 minutes - Build the portrait wireframe

- 7 minutes - Test the reading path
- 3 minutes - Save and submit

Included inputs and assets

- Synthetic CSV and formula-enabled XLSX mock data
- Editable PowerPoint start and worked-example files
- PROMPTS.md with copy-ready data-analysis, infographic, Gemini Notebook and text-to-image prompts
- AI Prompt Lab worksheet for provenance and human-change records

Submission

Submit the editable PPTX, completed XLSX, source CSV, prompt/source log, used assets and checklist. Record every AI tool, prompt, source, rejected claim and material human change.

Debrief

The wireframe communicates objective, hierarchy, evidence, flow, action and source space before visual styling begins.
