Activity 04 - Generate Visual Assets and Refine Them in PowerPoint

- Course: Infographics and Data Visualization with PowerPoint (TGS-2026064178)
- Duration: 35 minutes
- Tools: Text-to-image AI + PowerPoint
- Output: Five-stage process infographic and reusable PowerPoint component library

Objective

Use text-to-image prompting to generate a consistent asset set, then combine it with editable powerpoint labels, shapes, connectors and smartart.

Scenario

Northstar needs an editable five-stage process infographic for store managers. Use the supplied AI-generated sustainability asset sheet or regenerate a new set from the recorded text-to-image prompt. Use the images only as supporting visuals. Build all stage names, values, connectors, source labels and decision meaning as editable PowerPoint objects.

Detailed instructions

1. Review the supplied assets. Open the assets folder and ASSET-MANIFEST.txt. Confirm the files are synthetic training visuals, contain no factual claims and match the recorded prompt.

2. Write or adapt the image prompt. Copy the Text-to-image prompt from PROMPTS.md. Specify the four sustainability subjects, consistent flat style, palette, transparent background, no text, no logo and no watermark.

3. Generate an alternative set. Use an approved text-to-image tool to create one coherent asset sheet or four separate visuals. Do not upload restricted data or copyrighted reference artwork.

4. Inspect before use. Reject any result with embedded text, distorted objects, inconsistent visual grammar, ambiguous symbols or rights concerns. Record the accepted and rejected results.

5. Open the PowerPoint start file. Save a named working copy, set guides and margins, and insert only the approved assets.

6. Build editable information. Create the five stage containers, titles, metrics, connectors, source notes and decision labels as native PowerPoint objects. Do not bake claims into the image.

7. Align and distribute. Use Shape Format > Align and Distribute. Group each stage logically while keeping text and data editable.

8. Add accessibility. Write purpose-focused alt text for meaningful assets, mark decorative assets where appropriate and preserve direct text labels.

9. Complete provenance. Record tool, exact prompt, date, source status, intended use, review result, human changes, reviewer and owner in the workbook and ASSET-MANIFEST.txt.

Suggested timing

- 5 minutes - Set grid and build first component
- 15 minutes - Duplicate, align and connect
- 8 minutes - Insert and format icons

- 5 minutes - Compare SmartArt
- 2 minutes - Save and submit

Included inputs and assets

- Synthetic CSV and formula-enabled XLSX mock data
- Editable PowerPoint start and worked-example files
- PROMPTS.md with copy-ready data-analysis, infographic, Gemini Notebook and text-to-image prompts
- AI Prompt Lab worksheet for provenance and human-change records
- assets/ with a generated sustainability asset sheet, four transparent PNGs and ASSET-MANIFEST.txt

Submission

Submit the editable PPTX, completed XLSX, source CSV, prompt/source log, used assets and checklist. Record every AI tool, prompt, source, rejected claim and material human change.

Debrief

The process uses a consistent component system, real connectors, direct labels, purposeful whitespace and editable PowerPoint objects.
